VIP VTO Konnected PLC setup

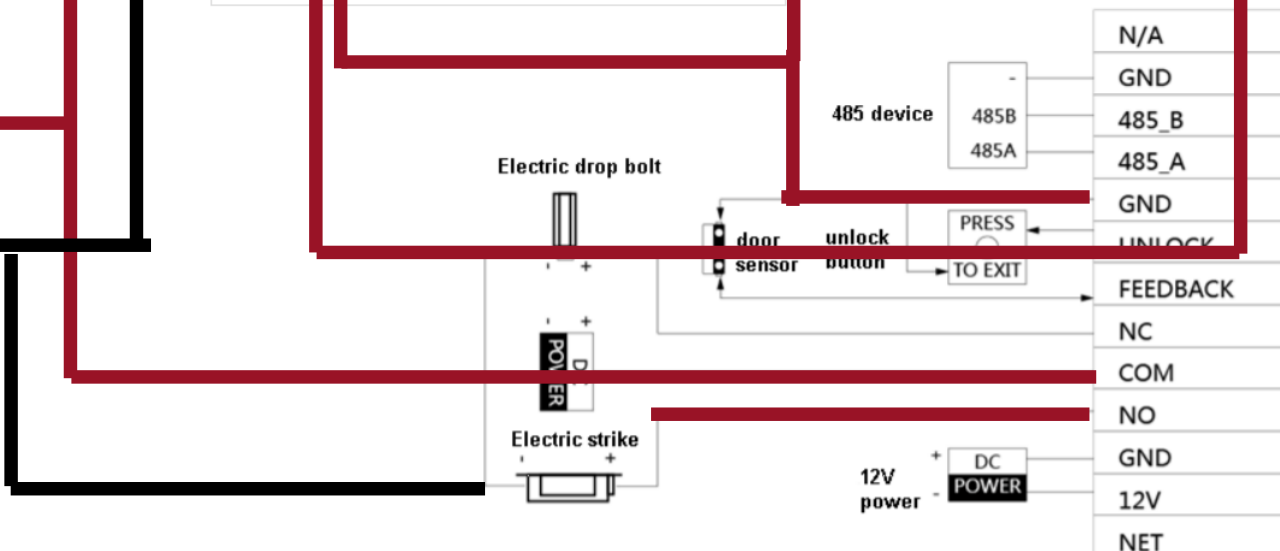

Door sensor and drop bolt are not used in this setup.
Konnected has the input for door sensor reed switch input

Momentary push button unlock/open

12V +
12V -

If PoE is used; 12v to VIP VTO is not needed. It is recommended to run 6 core security cable to front door to service mag-lock /door-sensor/open-button

Battery setup 12v feed

PLC Konnected wiring plan

Buck converters can step down voltage for DC

Oppto-couplers can be utilised as an isolated voltage translator, not for power feed e.g. 9v smoke alarm output translated to 3v state

12v feed bus-bars

AC must be isolated from DC
